JoyCall+ development team

Product Characteristics

1. All settings are automatically defaulted. – Auto configuration
(This product adjusts the sound related defaults automatically.)
2. Software upgrades will be performed online. – Online Auto Update
3. It provides an auto recording function. (Recording starts at the moment when you hold the phone and finishes when you put the phone down.)

4. There is a codec in the software so it doesn't require a separate audio player.
5. OGG or MP3 are available for the recording format.
6. It is easy to input or modify the call contents.
7. It is easy to search the recorded data.
8. It can limit the users by means of a security function.
9. It provides a convenient users interface.
10. It provides a convenient users interface. (MIC / Line-In)
11. It provides a customer management database function.
12. The folder for recorded data is marked with the date in the computer, and it can't be changed.
13. Various skins for software can be applied so users can organize desired GUI.

How to Install the Software

In order to use JoyCall+, the following specifications of computers is required.

Recommeded Specifications

OS : Windows 95/98/ME/2000/XP

CPU : Pentium III 400 MHz or more

RAM : 64Mb or more

HDD : At least 40Mb of free space

Sound Card

1. Turn on the desktop computer and start Windows.
2. When you insert the JoyCall+ installation CD, the installation screen will automatically appear. If it doesn't appear automatically, in the program manager mode, push **Start-Run** to enter the drive name, select setup, and click OK.

Note: The above picture will appear when you open the JoyCall+ installation CD on the D: drive.

3. The following installation screen will appear.

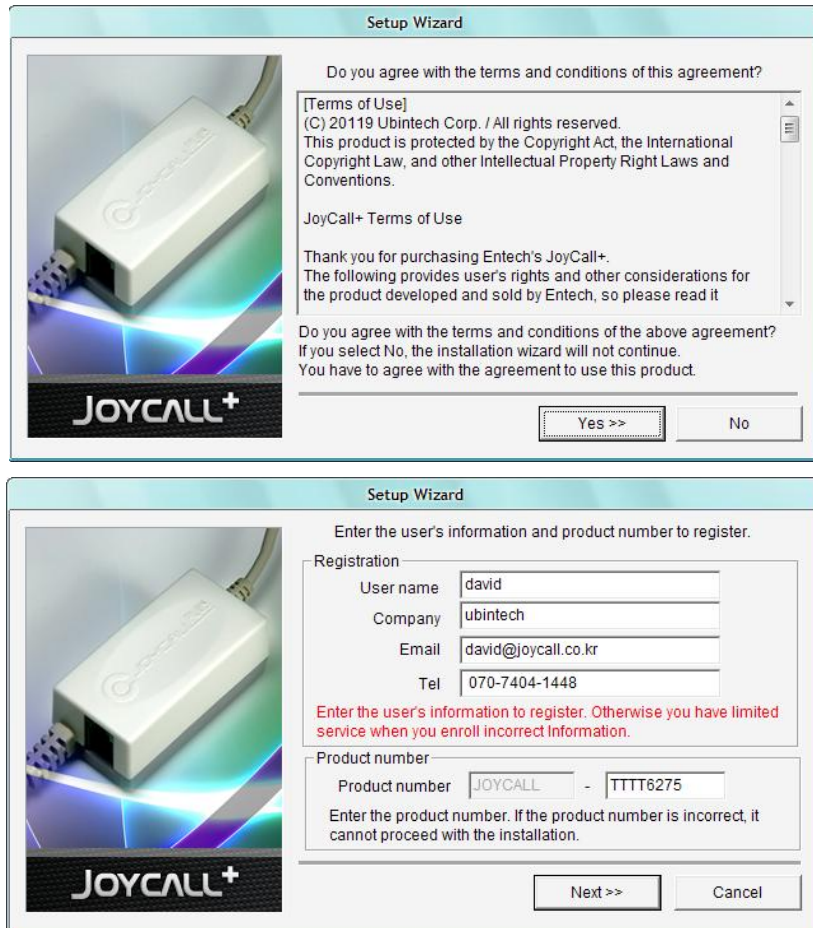

- **Setup** – Install the JoyCall+.
- **Explore** – It executes the Windows Explorer.
- **Read me** – It opens a readme.txt to show installation related information.
- **Manual** – It executes the PDF file called User's Manual.

Note: It requires Acrobat Reader Program which can be download from <http://www.adobe.com/> and installed.

4. If you click the [Setup] button, the terms of use will appear as in the following picture.

Click the [Yes >>] button, if you agree to the terms of use, you can register user's information and product number. (Product number is included in the product package.)

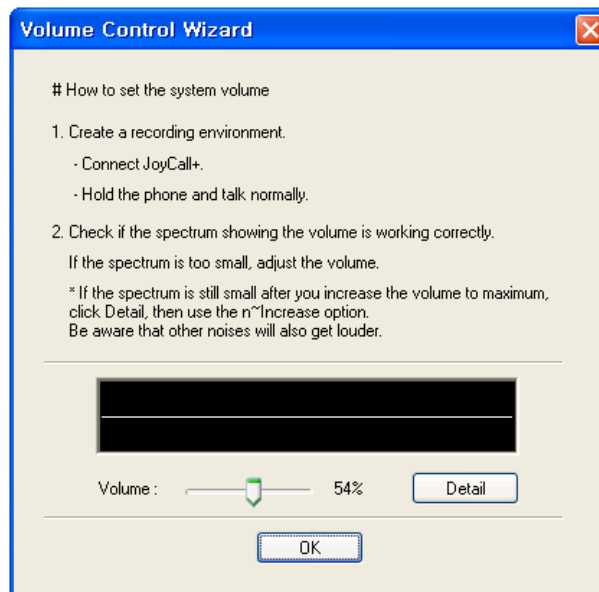

5. Correctly enter the product number, and push **[Next>>]**, then the following picture will appear showing the installation progress. Select **[I want to make a shortcut on the desktop]**, then a Shortcut icon will be created on the desktop and Start Menu.

Click **[Install]** to complete the installation, then the **[Finish]** Button the finish the installation process, after which the system will automatically start the JoyCall+ executable file.

6. After the installation is completed, the volume control wizard will be executed.

At this time, control the volume to a perfect sine wave which is not distorted because the spectrum wave of the screen is too small or too big.

If the volume is increased to the highest point but the wave is small, push **[Detail]** to use the software expansion function.

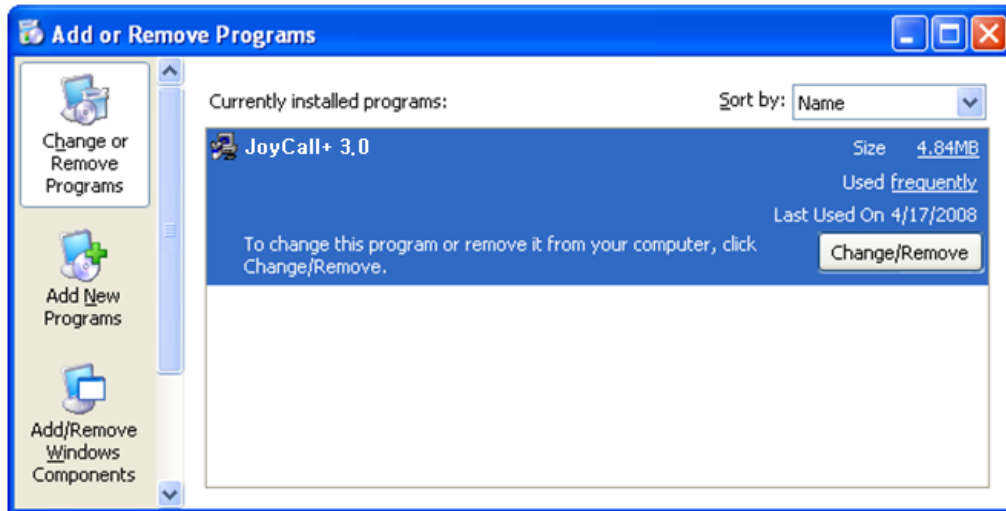

If the volume is increased to the highest point, but there is no wave, your sound card or microphone port may have a problem, so ask a computer engineer for assistance before you use JoyCall+.

How to Remove the Software

You can use the regular software removal method provided by Windows to delete the JoyCall+ software.

1. Open “**Add or Remove Programs**” in the Control Panel.

2. If you click **[Change/Remove]**, a message box asking for confirmation will appear. Click **[OK]**.

3. If you click **[Remove >>]** from the product list, the following message box saying that the removal is completed will appear. Click **[Ok]**.

| 'H' or 'h' | Help |

FAQ (Frequently Asked Questions)

*** It doesn't record.**

-> Check if the audio cable for the recording terminal(NTRS) is connected to the computer's microphone input terminal(pink).

-> Check if there is any input level signal on the right top of JoyCall+ when you hold the phone.

-> Check if the microphone volume is close to "0", and if it is, increase the volume.

*** After on phone call, why are many files created on the [Record List]?**

-> it is because when there is no sound, the system recognizes as the end of a call and automatically finishes recording, but when the sound comes back, it automatically starts recording again. Push [Options]-[Record]-[Recognition of Call End] to increase the time.

*** Do I have to register?**

-> You have to register to update the program online and to get technical support.

*** I want to use a microphone in the computer and use JoyCall+ at the same time, how should I do that?**

-> Change the input signal to "Line-In".
